

KANABO⁺

Nature made precise.

A medical-grade, unified ecosystem, that allows accurate consumption through vaporization, leading to better health & well-being.

The image shows two black VapePod vaporizers lying on a green surface. One is positioned diagonally from the top left towards the center, and the other is positioned diagonally from the top right towards the center. Both have clear glass mouthpieces and the brand name 'VapePod' printed on them. The background is a solid, vibrant green. The text 'VapePod+' is overlaid in white on the left side of the image.

VapePod⁺

Cannabis consumption - now safer and more accurate than ever.

A cutting-edge cannabis extract vaporization device, that includes metered-dosing, allowing extremely accurate consumption. The VapePod is the first-ever medically certified vaporization delivery system for cannabis high quality extracts.

VapePod is disrupting the medical cannabis market with a quality, medically certified delivery system that works synergistically with patented, precision-targeted formulas. This comprehensive offering is designed to provide trusted relief to those suffering from a variety of disorders.

The VapePod vaporizer is produced in a certified GMP medical facility in full compliance with ISO13485, setting a new medical standard, engendering trust and ensuring peace of mind for our global clientele. The device was approved in 2018 as a medical device for cannabis extracts by the Israeli Ministry of Health, and is the first-ever medically certified vaporizer for the delivery of cannabis based formulas.

Enhanced Bioavailability

Cannabis has gained legitimacy and recognition as a powerful source of relief for a number of ailments, but smoking as a delivery mechanism does not present a viable solution. Equally, ingestion has been found to significantly reduce therapeutic efficacy and bioavailability. In contrast, inhalation through vaporization dramatically improves the degree and rate of absorption of all the beneficial medical compounds in cannabis. Providing high bioavailability and exhibiting rapid onset, VapePod® is optimizing therapeutic efficiency, delivering cannabis-based treatments more safely and simply than ever before.

CCeLL Technology

UNPARALLELED PERFORMANCE

Unlike standard wick and atomizer designs, which can result in a subpar device that functions inefficiently with reduced flow and inconsistent heating, VapePod® utilizes next generation CCELL technology to guarantee a consistent temperature and steady flow.

POWERFUL BATTERY

VapePod is powered by a universally rechargeable, breath activated battery, with haptic feedback replacing traditional LED alerts for discreet operation.

POROUS CORE

The porosity of the CCELL core ensures continuous saturation, an increased cross sectional area reduces overheating, while radial heat reduces fluid viscosity and improves flow.

APPROVED MEDICAL DEVICE

VapePod is the first approved medical device of its kind, certified by the Israeli Ministry of Health as a medical device for inhalation. It is the only device approved for the vaporization of medical cannabis extracts providing a safe, consistent, and trustworthy user experience.

ACCURACY

VapePod provide metered dosing, controlling the exact amount of formulation administered to the user.

RELIABILITY

The CCeLL technology heating cextract and long lasting battery ensure consistent and unrivaled vapor performance.

SECURITY

VapePod's medical grade delivery system includes tamper proof pods to safeguard extracts from misuse, and provide a trusted user experience.

A top-down photograph of laboratory glassware on a solid red background. In the top left, a petri dish contains a small amount of orange liquid. In the center, a small glass vial with a white cap and a silver band lies horizontally. In the bottom right, the rim of a larger glass dish is visible, showing some markings. A dark, thin line runs diagonally across the scene.

Formulas

Kanabo develops THC extract formulas for CNS disorders, and non-THC extract formulas for the growing CBD market.

Our patent-pending, proprietary formulas combine consistent active ingredients, high precision, and clinical validation to provide a safe, accurate, and high-quality product for superior efficacy.

CBD Formulas

Full Plant Hemp Extract	55% CBD	300 Doses
No PG, VG, MCT & Pesticide Free	250mg CBD	0.5ml pod

Most CBD-rich products in the market today include 1-20% CBD, while Kanabo’s OTC formulas include a full spectrum of Cannabis extract with more than 70% of cannabinoids due to patent pending compositions. The formulas are made with a proprietary, patent-pending carrier solution that replaces the traditional electronic cigarette liquids like PG/VG and MCT extract diluents that dominate the market, and are suspected to release toxic materials when heated to the higher temperatures required for cannabis extract (unlike e-liquid based products). Kanabo’s proprietary neutral diluent allows for no irritation, high potency, and consistent dosing through the lifespan of the formula pod with superior bioavailability, as indicated by Kanabo’s clinical medical trials.

⊙	Focus	⊖	Serenity	⊕	Revive
Targets consumers who wish to increase concentration and calm hyperactivity, anxiety, and distractibility.		Targets consumers who wish to find relief from stress, nervousness, irritability, and panic or paranoia, by providing a sense of calm.		Targets consumers who wish to alleviate inflammation-induced pain, without feeling drowsy, groggy, or inebriated throughout the day.	

THC Formulas

Kanabo's R&D activities initially focused on the development of formulas of medical cannabis extracts with THC to target CNS disorders. The first formula targeted insomnia and sleep disorders. Development has included creating the finalized recipes and medical validation activities that have included literature review, anecdotal/observational studies, and a pre-clinical trial in a sleep model. The sleep formula has received U.S. PCT Patents for the unique composition of the formula.

These medical cannabis formulas will require medical prescription. Target markets for these formulas are countries with a legal medical Cannabis program.

 Sleep Disorder	 Chronic Pain	 Anxiety Disorder
Targets patients who suffer from sleep disorders exacerbated by chronic pain (from various CNS disorders) and want help falling and staying asleep along with relief from pain.	Targets patients who suffer from chronic pain (as a result of various CNS disorders) and want non-drowsy pain relief to stay focused throughout the day.	Targets patients who suffer from mood/behavior disruptions as a result of anxiety disorders.

kanabogroup.com

Kanabo is a medical R&D company, based in Israel, that develops pharmaceutical and nutraceutical cannabis formulas for vaporization, along with a medical grade vaporization system. We believe that by creating a holistic ecosystem that works together in synergy, we can create a new standard in the medical cannabis industry and improve the well-being of millions around the world. We focus on formulating cannabis-derived products for medical patients, and non-THC products for CBD consumers. We have been conducting extensive research and development in order to develop high-quality cannabis extract formulas, an innovative vaporizer, and smoking cessation solutions with the help of cannabis, making use easy, accessible and accurate for anyone in need of treatment. Clinical and validation activities, including safety and efficacy tests are conducted in Israel – a veteran in cannabis research.
